

Introducing the *JID* VisualDx Quiz

For dermatologists and cutaneous biologists alike, *seeing* what's wrong is a strong motivation for understanding or discovering what's wrong. The *JID* VisualDx Quiz, the latest addition to the *JID* Connector, unabashedly seeks to use this instinctive "hook" to entice readers, old and new, clinician or scientist, to familiarize themselves with the latest insights into disorders of the skin, hair, and nails.

In this inaugural month, four quizzes challenge our readers and connect them to recent or current *JID* articles that probe etiology or treatment of dermatologic disease. Each month going forward, our Quiz Editor, Robert Kirsner of the University of Miami, and his resident colleagues will highlight one disorder with the welcome collaboration of Logical Images, the creator–proprietor of VisualDx, a company offering an algorithmic approach to rational diagnosis and treatment

of skin disease. Each quiz will feature one clinical image from the more than 25,000 archived VisualDx images. After identifying the disease process, the reader will be directed to three questions regarding its pathogenesis or treatment, the answers for which are new findings, just published in one or more *JID* articles, electronically linked to the quiz to facilitate learning.

We hope you will enjoy these "bed-to-bench" challenges. We are sure you will also be impressed with the quality and diversity of the VisualDx images, as well as with the new insights into clinical medicine that appear monthly on the Journal's pages from research groups around the world.

Come learn with us!

Barbara A. Gilchrest
